

Overall App Structure

- Homepage (main landing page)
- Live monitoring (real-time screen after click “start”)
- Dashboard (logs and summaries)
- Chatbot
- Settings? (device connection? see if we need to pre-connect the device first, notifications)

Detailed Flow

1. Homepage (Yuki)

- welcome screen
- “Start” button to open a session
- “Labels” to choose activity type
- *connect device (if needed)*
- *profile (for first launch): age, typical stress triggers, goals*
- quick stat: last session duration, *HRV trend/stress indicator*
- recent activity log (last 3-5 sessions with timestamps and labels)
- top navigation: Live Monitor (monitoring page), History (dashboard), Chatbot, Settings
- FAQ

2. Live monitoring (Antonia)

- real-time chart
- HRV indicator + stress indicator
- current session timer
- device connection status
- pause/resume monitoring

3. Ending session (Gigi)

- session duration
- average/max HR
- average HRV & overall stress level
- add notes for the whole session?
- data automatically save to log
- user returns to dashboard

- Make sure summary page pops up when they click stop recording
4. Feedback (Gigi)
 - visual alert: “stress level rising”
 - sound alert (soft beeeeeeeep? calming tone?)
 - breathing prompt (4-7-8?; can be dismissed when stress level decrease)
 - session automatically stopped, button “Back to homepage”
 - Think of data collection issues (have a notice like “poor data” change positioning)
 - Change low medium high
 - Add real-time data quality feedback
 5. Dashboard (Tiffany)
 - past sessions
 - date & time
 - session type
 - duration
 - max/avg HR
 - avg HRV
 - stress summary
 - weekly/monthly stat
 - filtered stat (by session type)
 - personalized insight? “Your average HRV has increased xx% this week”
 6. Chatbot (Yuki)
 - accessible from any screen (on top)
 - chatbot responds using session data + general wellness advice
